

DECORATION IN 3D ADVERTISING

Catalogue 2019

Idea

is key to decoration

Whether it is 3D projects, lights, greenery, fabric decoration, imitation of the environment or surfaces - we will always create the world you want.

Our possibilities start where your imagination ends.

ow it works?

First we identify your needs and goals. We will prepare designs and proposals which will accompany our collective work.

The next step includes project documentation providing materials for production and assembly. Then we are going to hand over the finished project to you. We will be looking forward to further cooperation.

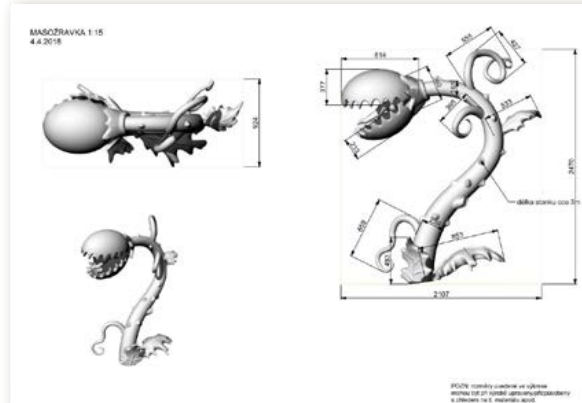

PROJECT

From design to realization

2D/3D visualisation

Division of work
to different departments

CNC cutting of objects

Surface treatment of
polystyrene

Paint surface

Final product

Company

DEPARTMENTS

DESIGN AND GRAPHIC

Design studio

design, 3D modeling of decorations for
CNC, printing data for production

Hand drawing

creativity, personal approach

Virtual sculpting

3D modeling

Development Studio

movement and sound programming

3D scanner

Scanning via mobile scanner

3D print

printing according to a 3D model

HANDCRAFT

Sculpture studio

creation of sculptures from polystyrene
& clay, models for forming at serial
production

Painting atelier

painting & making patina of sculpture
surfaces & 3D models from 3D printers

Surface treatment workshop

production of forms & laminate,
polyurethane products

Smithery

welding of steel & aluminum, production
of 2D & 3D motifs and constructions

Carpentry workshop

production of wooden constructions,
furniture & decoration of solid &
agglomerated material

Tailoring

sewing costumes, decorative curtains,
upholstery of statues & furniture

TECHNOLOGIES

Automatic machining

CNC milling machine with 7 axis machining of polystyrene, plastic, wood and polyurethane

Manual machining

polystyrene sculpting, preparation for final patina

Mechanical machining

use of lathe for processing polystyrene and wood

Polyurethane elastic

applying elastic pur to 3D models

Paintshop

surface treatment of decorations using synthetic, polyurethane or water-based paints

Lighting

various decorative lighting for indoor and outdoor areas

Company

Pilsner Urquell Prague

Planning holiday - only with Čedok. Čedok would probably not want this traveller we made for their marketing campaign. He had 450 cm and weighed over 860 kg.

Embossed objects are the simplest for CNC milling. We can mill an elephant in 7 hours. The materials used are polystyrene and PUR.

We didn't have any 3D model while creating this eye-catcher. That's why our designers spent a lot of time watching athletic indoor championships. As a result, statue was created in 3D data and our CNC milling machine was responsible for its production. The statue is larger than a real person.

Jumper Harfa, Prague

We produce shoe models for many world brands. It is always an oversized eye-catchers for stores where they serve as photopoints.

The delivered original is scanned and consequently the CNC milling machine cuts the model according to the obtained data.

We made the skate by hand according to the original. Production lasted 21 days. The material is polystyrene, polyurethane and foil.

Ice skates Avion, Bratislava

Hokey jerseys Avion, Bratislava

Ball Nike, Prague

Following the example of Gufex, which supplies the whole world with pucks, we also put a hand to the work. Unlike the competitor's 200 gram puck, ours weighed 3 tons.

Oversized puck Mannheim, SAP arena

3D wine bottle Equicom, France

You could only get the right Grande Capuccino in Prague, where the biggest coffee machine in the world was presented. There are 3 coffee makers inside to prepare your favorite drink.

Coffee maker Prague

Our 3D decorations light up the gardening marketplace in the misty England. Oversized cans and tools will attract anyone who visits this place.

Artistic tubes filled with flowers will make every place much more cozy. These are the reasons why you will be happy to return to such market in addition to nontraditional and original family photo.

The Film Festival in Prague, Letňany mall, was decorated by our movie carousel with the protagonists and main themes of individual movies. Diameter is 800 cm. Installation needed to be done very quickly, construction took only 5 hours.

The characters of Myšpulín, Fifinka, Bobík and Pindi are the main heroes of one of the longest-running Czech comics Čtyřlístek. This most famous group of friends has accompanied our childhood for 50 years.

We have made several series of these iconic characters that have been part of themed events, children's parties, exhibitions, or the premiere of Čtyřlístek Adventure movie.

The Minions visit to Bratislava was not without our participation. Part of the decorations were made by using virtual sculpture and CNC.

Little ponies, who could speak and move their head and tongues, headed to Turkey. Sculptures hide mechanisms for head and tongue movement as well as loudspeakers.

The Smurfs traveling exhibition has visited several shopping centers in France and Switzerland. The scenes were animated. It was first decoration, where we used 3D printing.

Vans shops, Europe

Escada Prague, Czech Republic

Nike Chelsea, Megastore

decoration in scenography

Butterfly house Prague, Czech Republic

The Tree - Tim Burton exhibition Prague, Czech Republic

Grevin museum Prague, Czech Republic

We produced a six-meter polystyrene face for the Vltava Live festival. Larger parts were made by a robotic machine while facial details were made by hand.

3D head České Budějovice

We're looking forward to your projects,
and helping you overcome all challenges
